DETAILED ACTION

Election/Restrictions

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
 - I. Claims 9-13, drawn to an analysis device, classified in class 435, subclass 283.1.
 - II. Claims 14-15, drawn to a system for analyzing materials comprising an analysis device and a support base, classified in class 435, subclass 283.1.
 - III. Claim 16, drawn to a method for evaluating materials, classified in class 435, subclass 6.
 - IV. Claims 17-23, drawn to a device comprising a housing having a first and second portion, classified in class 435, subclass 283.1.

The inventions are distinct, each from the other because of the following reasons:

2. Inventions I and II are related as combination and subcombination. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination as claimed does not require the particulars of the subcombination as claimed because the subcombination consists of a support base which has a control portion and a receptacle portion. It does not appear that the support base is required for the use of the device itself. The subcombination

Art Unit: 1634

has separate utility such as for the use of multiple analysis devices being used simultaneously.

3. Inventions I and IV are unrelated. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different modes of operation, different functions, or different effects (MPEP § 806.04, MPEP § 808.01). In the instant case the different inventions are drawn to two different devices, having different modes of operation and are mechanically different from one another. .

4. Inventions I and III are related as product and process of use. The inventions can be shown to be distinct if either or both of the following can be shown: (1) the process for using the product as claimed can be practiced with another materially different product or (2) the product as claimed can be used in a materially different process of using that product (MPEP § 806.05(h)). In the instant case the method may be practiced without the device, as not all of the elements of the device are required in the method claim.

5. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification (Group III), restriction for examination purposes as indicated is proper.

6. Because these inventions are distinct for the reasons given above and the search required for Group I is not required for Group II-IV, etc, restriction for examination purposes as indicated is proper.
